ALUMINUM-CLAD WOOD / SELECTION SHEET

Timber inside. Aluminum outside.

Three house-name directions for a coordinated window package. Compare the exterior outline and the actual assembly, not only the material label.

Clad Flush

A timber interior with exterior aluminum protection and a flush visual direction. Review fixed and opening sections together, including the junctions between neighboring units.

View Clad Flush / /products/aluclad/clad-flush

Clad Hidden Sash

The opening sash sits behind the exterior frame for a concealed-sash appearance. Review the inside and outside detail separately; fixed and operable units need not have identical sections.

View Clad Hidden Sash / /products/aluclad/clad-hidden-sash

Clad Passive

An insulation-focused construction to review as part of a whole-building energy strategy. Confirm the selected glazing, frame detail and applicable documentation. The house name is not a certification.

View Clad Passive / /products/aluclad/clad-passive

DECISIONS TO RECORD

- **Appearance.** Interior species and finish; exterior color and texture; actual fixed, sash and mullion sections.
- **Operation.** Opening arrangement, hinges, screens and coordination with adjoining patio doors.
- **Evidence.** Required whole-unit U-factor and SHGC, safety glazing, installation section and project-specific permit documents.

Configuration first. Published family references do not establish that a sightline, glass package and thermal value coexist in your unit. No blanket NFRC or Passive House certification is asserted here. Confirm the quoted configuration.
