WOOD / SELECTION SHEET

Natural timber. Two starting directions.

Timber Classic and Timber Estate are Windows Guy house names. This sheet helps frame the selection conversation; the quote and drawings define the supplied product.

Timber Classic

Laminated timber with softly rounded profiles and a traditional character. Review the available depth, glazing, wood species and finish against the openings in your drawings.

View Timber Classic / /products/wood/timber-classic

Timber Estate

A more substantial timber direction with a deeper profile expression. Compare the visible face and interior reveal beside fixed glazing rather than assuming that a deeper frame gives every assembly the same performance.

SPECIFY TOGETHER

- **Character.** Wood species, transparent or opaque finish, sample approval and how the grain reads across the elevation.
- **Use.** Opening direction, fixed-to-operable arrangement, hardware access and insect-screen needs.
- **Exposure.** Exterior finish care, access for maintenance and site conditions. Confirm the coating and care plan for the quoted configuration.
- **Documentation.** Glass make-up, safety glazing and required thermal or permit reports. Review installation sections with the local team.

What this sheet does not establish: a maximum size, a universal rating or an approved installation detail. Confirm profile sections, glazing, hardware and project requirements for the quoted configuration. Solid wood requires a quote from drawings.
